RE

13. What is not a desirable characteristic of a model

(A) abstraction.

(B) accuracy.

(C) prediction.

(D) robustness.

13. What is not a desirable characteristic of a model

(A) abstraction.

(B) accuracy.

(C) prediction.

(D) robustness.

## Domain requirements...

(A) can only be non-functional.

(B) can only be functional.

(C) can be reused.

(D) partially reflect the environment in which the system operates.

## Domain requirements...

(A) can only be non-functional.

(B) can only be functional.

(C) can be reused.

(D) partially reflect the environment in which the system operates.

According to I. Sommerville, examples of external requirements are (choose the correct one):

- (A) usability, ethical, legislative.
- (B) ethical, dependability, environmental.
- (C) ethical, legislative, regulatory.
- (D) ethical, legislative, environmental.

According to I. Sommerville, examples of external requirements are (choose the correct one):

- (A) usability, ethical, legislative.
- (B) ethical, dependability, environmental.
- (C) ethical, legislative, regulatory.
- (D) ethical, legislative, environmental.

# Concerning conflicts between non-functional requirements (NFRs), which one is false?

- (A) Depending on the granularity of the components, there can be a conflict between maintainability and performance.
- (B) Modularity improves maintainability and reliability.
- (C) Safety compromises performance.
- (D) Usability never gets in conflict with other NFRs as usability is always needed.

# Concerning conflicts between non-functional requirements (NFRs), which one is false?

- (A) Depending on the granularity of the components, there can be a conflict between maintainability and performance.
- (B) Modularity improves maintainability and reliability.
- (C) Safety compromises performance.
- (D) Usability never gets in conflict with other NFRs as usability is always needed.
